

CHAPTER

10

VI-MATHEMATICS-NCERT (2024-25)

10 .MENSURATION (notes)

REPAIRED BY: BALABHADRA SURESH

<https://sureshmathsmaterial.com/>

Perimeter: Perimeter is the distance covered along the boundary forming a closed figure. When you go round the figure once.

1. **Meera went to a park 150 m long and 80 m wide. She took one complete round on its boundary. What is the distance covered by her?**

Sol: The distance covered by Meera = $150\text{ m} + 80\text{ m} + 150\text{ m} + 80\text{ m} = 460\text{ m}$

2. **Find the perimeter of the following figures:**

(a) Perimeter = $AB + BC + CD + DA$

$$= 40\text{ cm} + 10\text{ cm} + 40\text{ cm} + 10\text{ cm} = 100\text{ cm}$$

(b) Perimeter = $AB + BC + CD + DA$

$$= 5\text{ cm} + 5\text{ cm} + 5\text{ cm} + 5\text{ cm} = 20\text{ cm}$$

(c) Perimeter = $AB + BC + CD + DE + EF + FG + GH + HI + IJ + JK + KL + LA$

$$= 1\text{ cm} + 3\text{ cm} + 3\text{ cm} + 1\text{ cm} + 3\text{ cm} + 3\text{ cm} + 1\text{ cm} + 3\text{ cm} + 3\text{ cm}$$

$$+ 1\text{ cm} + 3\text{ cm} + 3\text{ cm}$$

$$= 28\text{ cm}$$

(d) Perimeter = $AB + BC + CD + DE + EF + FA$

$$= 100\text{ cm} + 120\text{ cm} + 90\text{ cm} + 45\text{ cm} + 60\text{ cm} + 80\text{ cm}$$

$$= 495\text{ cm}$$

**Perimeter of a rectangle:**

$$\text{Perimeter of a rectangle} = 2 \times (\text{length} + \text{breadth}) = 2(l + b)$$

Try These

Find the perimeter of the following rectangles:

- (i) Length = 25 cm, Breadth = 12 cm

Perimeter by adding all the sides = $25 \text{ cm} + 12 \text{ cm} + 25 \text{ cm} + 12 \text{ cm} = 74 \text{ cm}$

Perimeter = $2 \times (\text{Length} + \text{Breadth}) = 2 \times (25 \text{ cm} + 12 \text{ cm}) = 2 \times (37 \text{ cm}) = 74 \text{ cm}$

(ii) **Length = 0.5 cm, Breadth = 0.25 cm**

Perimeter by adding all the sides = $0.5 \text{ cm} + 0.25 \text{ cm} + 0.5 \text{ cm} + 0.25 \text{ cm} = 1.5 \text{ cm}$

Perimeter = $2 \times (\text{Length} + \text{Breadth}) = 2 \times (0.5 \text{ cm} + 0.25 \text{ cm}) = 2 \times (0.75 \text{ cm}) = 1.5 \text{ cm}$

(iii) **Length = 18 cm, Breadth = 15 cm**

Perimeter by adding all the sides = $18 \text{ cm} + 15 \text{ cm} + 18 \text{ cm} + 15 \text{ cm} = 66 \text{ cm}$

Perimeter = $2 \times (\text{Length} + \text{Breadth}) = 2 \times (18 \text{ cm} + 15 \text{ cm}) = 2 \times (33 \text{ cm}) = 66 \text{ cm}$

(iv) **Length = 10.5 cm, Breadth = 8.5 cm**

Perimeter by adding all the sides = $10.5 \text{ cm} + 8.5 \text{ cm} + 10.5 \text{ cm} + 8.5 \text{ cm} = 38 \text{ cm}$

Perimeter = $2 \times (\text{Length} + \text{Breadth}) = 2 \times (10.5 \text{ cm} + 8.5 \text{ cm}) = 2 \times (19 \text{ cm}) = 38 \text{ cm}$

Example 1 : Shabana wants to put a lace border all around a rectangular table cover 3 m long and 2 m wide. Find the length of the lace required by Shabana.

Sol: Length = 3 m, Breadth = 2 m

$$\begin{aligned} \text{Perimeter} &= 2 \times (\text{length} + \text{breadth}) \\ &= 2 \times (3 \text{ m} + 2 \text{ m}) = 2 \times 5 \text{ m} = 10 \text{ m} \end{aligned}$$

So, required length of the lace is 10 m.

Example 2 : An athlete takes 10 rounds of a rectangular park, 50 m long and 25 m wide. Find the total distance covered by him.

Sol: Length of the rectangular park = 50 m

Breadth of the rectangular park = 25 m

Perimeter of the rectangular park = $2 \times (\text{length} + \text{breadth})$

$$= 2 \times (50 \text{ m} + 25 \text{ m})$$

$$= 2 \times 75 \text{ m} = 150 \text{ m}$$

The distance covered by the athlete in one round = 150 m.

Distance covered in 10 rounds = $10 \times 150 \text{ m} = 1500 \text{ m}$.

The total distance covered by the athlete is 1500 m.

Example 3 : Find the perimeter of a rectangle whose length and breadth are 150 cm and 1 m respectively.

Sol: Length = 150 cm, Breadth = 1m = 100 cm.

Perimeter of the rectangle = $2 \times (\text{length} + \text{breadth})$

$$= 2 \times (150 \text{ cm} + 100 \text{ cm})$$

$$= 2 \times (250 \text{ cm}) = 500 \text{ cm} = 5 \text{ m}.$$

Example 4 : A farmer has a rectangular field of length and breadth 240 m and 180 m respectively. He wants to fence it with 3 rounds of rope as shown in figure 10.4.

What is the total length of rope he must use?

Sol: Length=240 m, Breadth=180 m.

Perimeter of the field = $2 \times (\text{length} + \text{breadth})$

$$= 2 \times (240 \text{ m} + 180 \text{ m})$$

$$= 2 \times 420 \text{ m} = 840 \text{ m}$$

Total length of rope required = $3 \times 840 \text{ m} = 2520 \text{ m}$.

Example 5 : Find the cost of fencing a rectangular park of length 250 m and breadth 175 m at the rate of ₹ 12 per metre.

Sol: Length of the rectangular park = 250 m

Breadth of the rectangular park = 175 m

Perimeter of the rectangle = $2 \times (\text{length} + \text{breadth})$

$$= 2 \times (250 \text{ m} + 175 \text{ m}) = 2 \times (425 \text{ m}) = 850 \text{ m}$$

Cost of fencing 1m of park = ₹ 12

The total cost of fencing the park = ₹ 12 \times 850 = ₹ 10200

Perimeter of a square:

Perimeter of a square = $4 \times \text{side}$

Perimeter of an equilateral triangle:

Perimeter of an equilateral triangle = $3 \times \text{side}$

Example 6 : Find the distance travelled by Shaina if she takes three rounds of a square park of side 70 m.

Sol: Length of side=70 m

Perimeter of the square park = $4 \times \text{length of a side} = 4 \times 70 \text{ m} = 280 \text{ m}$

Distance covered in one round = 280 m.

Distance travelled in three rounds= $3 \times 280 \text{ m} = 840 \text{ m}$.

Example 7 : Pinky runs around a square field of side 75 m, Bob runs around a rectangular field with length 160 m and breadth 105 m. Who covers more distance and by how much?

Sol: Perimeter of the square = $4 \times \text{length of a side} = 4 \times 75 \text{ m} = 300 \text{ m}$

Distance covered by Pinky in one round=300 m.

Perimeter of the rectangle= $2 \times (\text{length} + \text{breadth})$

$$= 2 \times (160 \text{ m} + 105 \text{ m})$$

$$= 2 \times 265 \text{ m} = 530 \text{ m}.$$

Distance covered by Bob in one round=530 m

Difference in the distance covered = $530 \text{ m} - 300 \text{ m} = 230 \text{ m}$.

Therefore, Bob covers more distance by 230 m.

Example 8 : Find the perimeter of a regular pentagon with each side measuring 3 cm.

Sol: Side=3 cm,

Perimeter of the regular pentagon= $5 \times \text{side} = 5 \times 3 \text{ cm} = 15 \text{ cm}$.

Example 9 : The perimeter of a regular hexagon is 18 cm. How long is its one side?

Sol: perimeter of a regular hexagon = 18 cm

$$6 \times \text{Side} = 18 \text{ cm}$$

$$\text{Side} = \frac{18}{6} = 3 \text{ cm}$$

EXERCISE 10.2

1. Find the perimeter of each of the following figures :

(a) Perimeter = $2 + 1 + 5 + 4 = 12 \text{ cm}$

(b) Perimeter = $23 + 35 + 40 + 35 = 133 \text{ cm}$

(c) Perimeter = $15 + 15 + 15 + 15 = 60 \text{ cm}$

(d) Perimeter = $4 + 4 + 4 + 4 + 4 = 20 \text{ cm}$

(e) Perimeter = $2.5 + 2.5 + 0.5 + 4 + 1 + 4 + 0.5 = 15 \text{ cm}$

2. The lid of a rectangular box of sides 40 cm by 10 cm is sealed all round with tape. What is the length of the tape required?

Sol: Length of lid = 40 cm, Breadth of lid = 10 cm

$$\text{Perimeter} = 2 \times (\text{length} + \text{breadth})$$

$$= 2 \times (40 + 10) = 2 \times 50 = 100 \text{ cm}$$

The length of the tape required = 100 cm. = 1 m.

3. A table-top measures 2 m 25 cm by 1 m 50 cm. What is the perimeter of the table-top?

Sol: Length = 2 m 25 cm = 2.25 m, Breadth = 1 m 50 cm = 1.50 m

$$\text{Perimeter} = 2 \times (\text{length} + \text{breadth})$$

$$= 2 \times (2.25 + 1.50)$$

$$= 2 \times 3.75 = 7.50 \text{ m} = 7 \text{ m } 50 \text{ cm}$$

4. What is the length of the wooden strip required to frame a photograph of length and breadth 32 cm and 21 cm respectively?

Sol: Length of frame = 32 cm

Breadth of frame = 21 cm

$$\text{Perimeter of the frame} = 2 \times (\text{length} + \text{breadth})$$

$$=2 \times (32+21)=2 \times 53=106 \text{ cm}$$

\therefore The length of the wooden strip required=106 cm.

- 5. A rectangular piece of land measures 0.7 km by 0.5 km. Each side is to be fenced with 4 rows of wires. What is the length of the wire needed?**

Sol: Length of land=0.7 km

Breadth of land=0.5 km

Perimeter of the land= $2 \times (\text{length} + \text{breadth})$

$$=2 \times (0.7+0.5)=2 \times 1.2=2.4 \text{ km}$$

The length of the wire needed to fence= $4 \times 2.4 \text{ km}=9.6 \text{ km}$.

- 6. Find the perimeter of each of the following shapes :**

- (a) A triangle of sides 3 cm, 4 cm and 5 cm.**

Sol: Perimeter of triangle= 3 cm+4 cm+5 cm=12 cm.

- (b) An equilateral triangle of side 9 cm.**

Sol: Perimeter of An equilateral triangle= $3 \times \text{side}=3 \times 9 \text{ cm}=27 \text{ cm}$.

- (c) An isosceles triangle with equal sides 8 cm each and third side 6 cm**

Sol: Perimeter of An isosceles triangle= $8 \text{ cm}+8 \text{ cm}+6 \text{ cm}=22 \text{ cm}$

- 7. Find the perimeter of a triangle with sides measuring 10 cm, 14 cm and 15 cm.**

Sol: The perimeter of triangle= $10+14+15=39 \text{ cm}$.

- 8. Find the perimeter of a regular hexagon with each side measuring 8 m.**

Sol: The perimeter of regular hexagon= $6 \times \text{side}=6 \times 8 \text{ m}=48 \text{ m}$.

- 9. Find the side of the square whose perimeter is 20 m.**

Sol: Perimeter of square= 20 m

$$4 \times \text{side} = 20 \text{ m}$$

$$\text{Side of the square} = \frac{20 \text{ m}}{4} = 5 \text{ m}$$

- 10. The perimeter of a regular pentagon is 100 cm. How long is its each side?**

Sol: The perimeter of a regular pentagon = 100 cm

$$5 \times \text{side of pentagon} = 100 \text{ cm}$$

$$\text{Side of pentagon} = \frac{100 \text{ cm}}{5} = 20 \text{ cm}$$

11. A piece of string is 30 cm long. What will be the length of each side if the string is used to form :

(a) a square?

Sol: Perimeter of square = 30 cm

$$4 \times \text{side of square} = 30 \text{ cm}$$

$$\text{Side of square} = \frac{30 \text{ cm}}{4} = 7.5 \text{ cm}$$

(b) an equilateral triangle?

Sol: Perimeter of an equilateral triangle = 30 cm

$$3 \times \text{side of an equilateral triangle} = 30 \text{ cm}$$

$$\text{Side of an equilateral triangle} = \frac{30 \text{ cm}}{3} = 10 \text{ cm}$$

(c) a regular hexagon?

Sol: Perimeter of a regular hexagon = 30 cm

$$6 \times \text{side of a regular hexagon} = 30 \text{ cm}$$

$$\text{Side of a regular hexagon} = \frac{30 \text{ cm}}{6} = 5 \text{ cm}$$

12. Two sides of a triangle are 12 cm and 14 cm. The perimeter of the triangle is 36 cm. What is its third side?

Sol: The perimeter of the triangle = 36 cm

$$AB + BC + CA = 36 \text{ cm}$$

$$12 \text{ cm} + 14 \text{ cm} + CA = 36 \text{ cm}$$

$$26 \text{ cm} + CA = 36 \text{ cm}$$

$$CA = 36 \text{ cm} - 26 \text{ cm} = 10 \text{ cm}$$

The third side = 10 cm.

13. Find the cost of fencing a square park of side 250 m at the rate of ₹ 20 per metre.

Sol: side of the square park = 250 m

$$\text{Perimeter of the square park} = 4 \times \text{side} = 4 \times 250 \text{ m} = 1000 \text{ m.}$$

Cost of fencing per 1 m = ₹ 20

Total cost of fencing = ₹ 20 × 1000 = ₹ 20,000

14. Find the cost of fencing a rectangular park of length 175 m and breadth 125 m at the rate of ₹ 12 per metre.

Sol: length = 175 m and breadth = 125 m

Perimeter of rectangular park = $2 \times (\text{Length} + \text{Breadth}) = 2 \times (175 + 125) = 2 \times 300 = 600$ m

The cost of fencing per 1 m = ₹ 12

Total cost of fencing = ₹ 12 × 600 = ₹ 7200

15. Sweety runs around a square park of side 75 m. Bulbul runs around a rectangular park with length 60 m and breadth 45 m. Who covers less distance?

Sol: Side of square park = 75 m.

Perimeter of the square park = $4 \times \text{side} = 4 \times 75$ m = 300 m.

Rectangular park : Length = 60 m, Breadth = 45 m

Perimeter of rectangular park = $2 \times (\text{Length} + \text{Breadth}) = 2 \times (60 \text{ m} + 45 \text{ m}) = 2 \times 105 \text{ m} = 210$ m.

Sweety covers 300 m and Bulbul covers 210 m.

∴ Bulbul covers less distance.

16. What is the perimeter of each of the following figures? What do you infer from the answers?

(a) Side of the square = 25 cm.

Perimeter of the square = $4 \times \text{side} = 4 \times 25$ cm = 100 cm.

(b) Length = 40 cm, Breadth = 10 cm.

Perimeter of rectangular = $2 \times (\text{Length} + \text{Breadth}) = 2 \times (40\text{cm} + 10\text{cm}) = 2 \times 50\text{ cm} = 100\text{ cm}$

(c) Length = 30 cm, Breadth = 20 cm.

Perimeter of rectangular = $2 \times (\text{Length} + \text{Breadth}) = 2 \times (30\text{cm} + 20\text{cm}) = 2 \times 50\text{ cm} = 100\text{ cm}$

(d) Perimeter of triangle = Sum of all sides = $30\text{ cm} + 30\text{ cm} + 40\text{ cm} = 100\text{ cm}$.

We observe all the figures have same perimeter.

17. Avneet buys 9 square paving slabs, each with a side of $\frac{1}{2}\text{m}$. He lays them in the form of a square.

(a) What is the perimeter of his arrangement [Fig 10.7(i)]?

Sol: Side of square = $3 \times \frac{1}{2}\text{ m} = \frac{3}{2}\text{ m} = 1.5\text{ m}$

Perimeter of the square = $4 \times 1.5\text{ m} = 6\text{ m}$

(b) Shari does not like his arrangement. She gets him to lay them out like a cross. What is the perimeter of her arrangement [(Fig 10.7 (ii))]?

Sol: Perimeter of the cross figure = $20 \times \frac{1}{2}\text{ m} = 10\text{ m}$

(c) Which has greater perimeter?

Sol: The cross figure has greater perimeter.

(d) Avneet wonders if there is a way of getting an even greater perimeter. Can you find a way of doing this? (The paving slabs must meet along complete edges i.e. they cannot be broken.)

Sol:

Length = $9 \times 0.5 = 4.5\text{ m}$, Breadth = 0.5 m

Perimeter = $2 \times (4.5\text{ m} + 0.5\text{ m}) = 2 \times 5\text{ m} = 10\text{ m}$.

Area

The amount of surface enclosed by a closed figure is called its area.

(i) The area of one full square is taken as 1 sq unit.

(ii) The area of one full square with side 1 cm will be 1 sq cm.

Example 10 : Find the area of the shape shown in the figure 10.10.

Sol: Fully-filled squares = 3

Area covered by full squares = $3 \times 1\text{ sq units} = 3\text{ sq units}$

Half-filled squares = 3

$$\text{Area covered by half squares} = 3 \times \frac{1}{2} \text{ sq units} = \frac{3}{2} = 1 \frac{1}{2} \text{ sq units}$$

$$\text{Total area} = 3 + 1 \frac{1}{2} = 4 \frac{1}{2} \text{ sq units}$$

Example 11 : By counting squares, estimate the area of the figure

Sol: Full-filled squares = 11

More than half-filled squares = 7

Half-filled squares = 3

$$\text{Total area} = (11 + 7) \times 1 \text{ sq unit} + 3 \times \frac{1}{2} \text{ sq unit}$$

$$= 18 + 1 \frac{1}{2} = 19 \frac{1}{2} \text{ sq units}$$

Example 12 : By counting squares, estimate the area of the figure 10.9 a.

Sol: Full-filled squares = 1

More than half-filled squares = 7

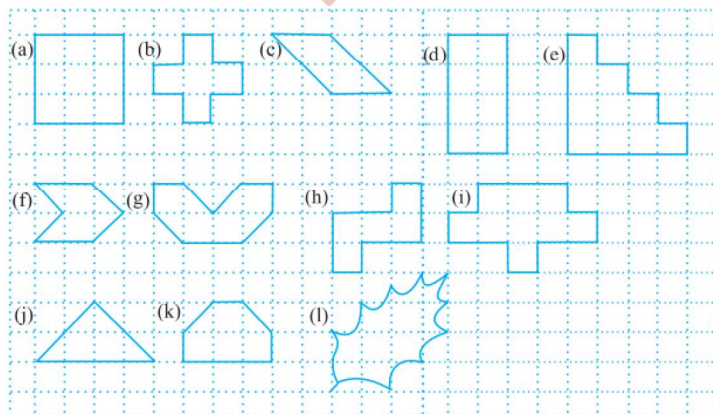

Half-filled squares = 0

$$\text{Total area} = (1 + 7) \times 1 \text{ sq unit} = 8 \text{ sq unit.}$$

EXERCISE 10.2

1. Find the areas of the following figures by counting square:

(a) Full filled squares = 9

$$\text{Area of the figure} = 9 \times 1 \text{ sq unit} = 9 \text{ sq units.}$$

(b) Full filled squares = 5

$$\text{Area of the figure} = 5 \times 1 \text{ sq unit} = 5 \text{ sq units.}$$

(c) Full filled squares=2

Half-filled squares=4

$$\text{Area of the figure} = 2 \times 1 + 4 \times \frac{1}{2} = 2 + 2 = 4 \text{ sq units.}$$

(d) Full filled squares=8

Area of the figure=8×1sq unit=8 sq units

(e) Full filled squares=10

Area of the figure=10×1sq unit=10 sq units.

(f) Full filled squares=2

Half-filled squares=4

$$\text{Area of the figure} = 2 \times 1 + 4 \times \frac{1}{2} = 2 + 2 = 4 \text{ sq units.}$$

(g) Full filled squares=4

Half-filled squares=4

$$\text{Area of the figure} = 4 \times 1 + 4 \times \frac{1}{2} = 4 + 2 = 6 \text{ sq units.}$$

(h) Full filled squares=5

Area of the figure=5×1sq unit=5 sq units.

(i) Full filled squares=9

Area of the figure=9×1sq unit=9 sq units.

(j) Full filled squares=2

Half-filled squares=4

$$\text{Area of the figure} = 2 \times 1 + 4 \times \frac{1}{2} = 2 + 2 = 4 \text{ sq units.}$$

Area of a rectangle:

Area of a rectangle = length × breadth

Area of a square:

Area of the square = side × side

Example 13 : Find the area of a rectangle whose length and breadth are 12 cm and 4 cm respectively.

Sol: Length=12 cm, Breadth=4 cm.

$$\begin{aligned} \text{Area of the rectangle} &= \text{length} \times \text{breadth} \\ &= 12 \text{ cm} \times 4 \text{ cm} = 48 \text{ sq cm.} \end{aligned}$$

Example 14 : Find the area of a square plot of side 8 m.

Sol: Side = 8 m

$$\begin{aligned} \text{Area of the square} &= \text{side} \times \text{side} \\ &= 8 \text{ m} \times 8 \text{ m} = 64 \text{ sq m.} \end{aligned}$$

Example 15 : The area of a rectangular piece of cardboard is 36 sq cm and its length is 9 cm. What is the width of the cardboard?

Sol: Length = 9 cm, Width = ?

Area of the rectangle = 36 sq cm

length \times width = 36 sq cm

$9 \times \text{width} = 36$

Width = $\frac{36}{9} = 4$ cm

\therefore The width of the rectangular cardboard is 4 cm.

Example 16 : Bob wants to cover the floor of a room 3 m wide and 4 m long by squared tiles. If each square tile is of side 0.5 m, then find the number of tiles required to cover the floor of the room.

Sol: Length = 4 m, Breadth = 3 m

Area of the floor = length \times breadth = 4 m \times 3 m = 12 sq m

Area of one square tile = side \times side = 0.5 m \times 0.5 m = 0.25 sq m

Number of tiles required = $\frac{\text{Area of the floor}}{\text{Area of one tile}} = \frac{12 \times 100}{0.25 \times 100} = \frac{1200}{25} = 48$

Example 17 : Find the area in square metre of a piece of cloth 1 m 25 cm wide and 2 m long.

Sol: Length = 2 m, Breadth = 1 m 25 cm = 1.25 m

Area of the cloth = length \times breadth

= 2 m \times 1.25 m = 2.50 sq.m

EXERCISE 10.3

1. Find the areas of the rectangles whose sides are :

(a) 3 cm and 4 cm

Sol: Length = 3 cm, Breadth = 4 cm.

Area of the rectangle = length \times breadth = 3 cm \times 4 cm = 12 sq cm

(b) 12 m and 21 m

Sol: Length = 12 m, Breadth = 21 m.

Area of the rectangle = length \times breadth = 12 cm \times 21 cm = 252 sq m

(c) 2 km and 3 km

Sol: Length = 2 km, Breadth = 3 km.

Area of the rectangle = length \times breadth = 2 km \times 3 km = 6 sq km

(d) 2 m and 70 cm

Sol: Length = 2 m, Breadth = 70 cm = 0.70 m.

Area of the rectangle = length \times breadth = 2 m \times 0.70 m = 1.40 sq cm

2. Find the areas of the squares whose sides are :

(a) 10 cm

Sol: Side= 10 cm

$$\begin{aligned}\text{Area of the square} &= \text{side} \times \text{side} \\ &= 10 \text{ cm} \times 10 \text{ cm} = 100 \text{ sq cm}\end{aligned}$$

(b) 14 cm

Sol: Side= 14 cm

$$\begin{aligned}\text{Area of the square} &= \text{side} \times \text{side} \\ &= 14 \text{ cm} \times 14 \text{ cm} = 196 \text{ sq cm}\end{aligned}$$

(c) 5 m

Sol: Side= 5 m

$$\begin{aligned}\text{Area of the square} &= \text{side} \times \text{side} \\ &= 5 \text{ m} \times 5 \text{ m} = 25 \text{ sq m}\end{aligned}$$

3. The length and breadth of three rectangles are as given below : Which one has the largest area and which one has the smallest?

(a) 9 m and 6 m, (b) 17 m and 3 m. (c) 4 m and 14 m

Sol: Area of the rectangle (a) = $9 \text{ m} \times 6 \text{ m} = 54 \text{ sq m}$

Area of the rectangle (b) = $17 \text{ m} \times 3 \text{ m} = 51 \text{ sq m}$

Area of the rectangle (c) = $4 \text{ m} \times 14 \text{ m} = 56 \text{ sq m}$

The rectangle (c) has the largest area and (b) has the smallest area.

4. The area of a rectangular garden 50 m long is 300 sq m. Find the width of the garden.

Sol: The area of a rectangular garden = 300 sq m.

$$\text{long} \times \text{width} = 300 \text{ sqm}$$

$$50 \times \text{width} = 300$$

$$\text{width} = \frac{300}{50} = 6 \text{ m}$$

The width of the garden = 6 m

5. What is the cost of tiling a rectangular plot of land 500 m long and 200 m wide at the rate of ₹ 8 per hundred sq m.?

Sol: Length = 500 m, Breadth = 200 m

$$\text{Area of rectangular plot} = \text{length} \times \text{breadth} = 500 \text{ m} \times 200 \text{ m} = 100000 \text{ sq m}$$

$$\text{Cost of tiling per } 100 \text{ sq m} = ₹ 8$$

$$\text{Cost of tiling per } 100000 \text{ sq m} = \frac{100000 \times 8}{100} = ₹ 8000$$

The cost of tiling a rectangular plot of land = ₹ 8000

6. **A table-top measures 2 m by 1 m 50 cm. What is its area in square metres?**

Sol: Length = 2 m, Breadth = 1 m 50 cm = 1.50 m

$$\text{Area of table top} = \text{length} \times \text{breadth} = 2 \text{ m} \times 1.50 \text{ m} = 3 \text{ sq m}$$

7. **A room is 4 m long and 3 m 50 cm wide. How many square metres of carpet is needed to cover the floor of the room?**

Sol: Length = 4 m, Breadth = 3 m 50 cm = 3.50 m

$$\text{Area of room} = \text{length} \times \text{breadth} = 4 \text{ m} \times 3.50 \text{ m} = 14 \text{ sq m}$$

The area of required carpet = 14 sq m

8. **A floor is 5 m long and 4 m wide. A square carpet of sides 3 m is laid on the floor. Find the area of the floor that is not carpeted.**

Sol: Length = 5 m, breadth = 4 m

$$\text{Area of floor} = \text{length} \times \text{breadth} = 5 \text{ m} \times 4 \text{ m} = 20 \text{ sq m}$$

Side of square carpet = 3 m

$$\text{Area of square carpet} = \text{side} \times \text{side} = 3 \text{ m} \times 3 \text{ m} = 9 \text{ sq m}$$

$$\text{The area of the floor that is not carpeted} = 20 \text{ sq m} - 9 \text{ sq m} = 11 \text{ sq m}$$

9. **Five square flower beds each of sides 1 m are dug on a piece of land 5 m long and 4 m wide. What is the area of the remaining part of the land?**

Sol: Side of square flower bed = 1 m

$$\text{Area of flower bed} = \text{side} \times \text{side} = 1 \text{ m} \times 1 \text{ m} = 1 \text{ sq m}$$

$$\text{Area of 5 flower beds} = 5 \times 1 \text{ sq m} = 5 \text{ sq m}$$

$$\text{Area of land} = 5 \text{ m} \times 4 \text{ m} = 20 \text{ sq m}$$

$$\text{The area of the remaining part of the land} = 20 \text{ sq m} - 5 \text{ sq m} = 15 \text{ sq m}$$

10. By splitting the following figures into rectangles, find their areas (The measures are given in centimetres).

Sol: (a) Area of rectangle (I) = $2 \times 3 = 6$ sq cm

Area of rectangle (II) = $4 \times 1 = 4$ sq cm

Area of rectangle (III) = $2 \times 3 = 6$ sq cm

Area of rectangle (IV) = $4 \times 3 = 12$ sq cm

Total area of the figure (a) = $6 + 4 + 6 + 12 = 28$ sq cm

(b) Area of rectangle (I) = $5 \times 1 = 5$ sq cm

Area of rectangle (II) = $2 \times 1 = 2$ sq cm

Area of rectangle (III) = $2 \times 1 = 2$ sq cm

Total area of the figure (b) = $5 + 2 + 2 = 9$ sq cm

11. Split the following shapes into rectangles and find their areas. (The measures are given in centimetres)

Sol: (a) Area of rectangle (I) = $10 \times 2 = 20$ sq cm

Area of rectangle (II) = $10 \times 2 = 20$ sq cm

Total area of the figure = $20 + 20 = 40$ sq cm

(b) Area of square (I) = $7 \times 7 = 49$ sq cm

Area of square (II) = $7 \times 7 = 49$ sq cm

Area of rectangle (III) = $21 \times 7 = 147$ sq cm

Total area of the figure = $49 + 49 + 147 = 245$ sq cm

(c) Area of rectangle (I) = $5 \times 1 = 5$ sq cm

Area of rectangle (II) = $4 \times 1 = 4$ sq cm

Total area of the figure = $5 + 4 = 9$ sq cm

12. How many tiles whose length and breadth are 12 cm and 5 cm respectively will be needed to fit in a rectangular region whose length and breadth are respectively: (a) 100 cm and 144 cm (b) 70 cm and 36 cm.

Sol: Area of tile = $12 \text{ cm} \times 5 \text{ cm}$

(a) Area of rectangular region = $100 \text{ cm} \times 144 \text{ cm}$

$$\text{The number of tiles needed} = \frac{\text{Area of rectangular region}}{\text{Area of tile}} = \frac{100 \times 144}{12 \times 5} = 20 \times 12 = 240$$

(b) Area of rectangular region = $70 \text{ cm} \times 36 \text{ cm}$

$$\text{The number of tiles needed} = \frac{\text{Area of rectangular region}}{\text{Area of tile}} = \frac{70 \times 36}{12 \times 5} = 14 \times 3 = 42$$
